## ***The Foundation For Quality & Consistency***

**O**ur long-range commitment to quality is focused in our manufacturing processes - where the parts are produced!

The best processing capabilities for producing the finest quality products are not always found in generic equipment. By combining years of product experience with innovative engineering, SPEARS® ongoing program of in-house equipment modification and development has custom-tailored our processes for producing the best in thermoplastic valves, fittings, and other piping system components.

---

---

---

**C**omputerized process control technology is used to integrate equipment function with final production. The result is consistent product quality in every part produced - more assurance that you receive the same fine quality in every order.

Simply put, when it comes to thermoplastic valve and fitting manufacturing know-how, no one does it better than SPEARS®!

**To Whom It May Concern:**

100 percent of the PVC pipe produced by Northern Pipe Products Inc. is manufactured in the United States of America using PVC resin manufactured in the USA. The ingredients used in the PVC compounding of the resin are also made in the USA.

Northern Pipe Products PVC Gasketed Sewer Pipe is made from gasketed joints conforming to ASTM D-3212 (Standard Specifications for Drain and Sewer Plastic Pipes Using Flexible Elastomeric Seals). All gaskets conform to ASTM F-477 (Standard Specification for Elastomeric Seals for Joining Plastic Pipe). Spigot ends are beveled and insertions depths are marked for correct installation. Northern Pipe Products employs the Rieber Gasket System. The Rieber joining system is a factory made "locked-in" flexible elastomeric seal. The gasket is installed in the bell race during manufacture of the joint. It should not be removed for any reason; destruction of the joint occurs.
