As America's Faucet Innovation Leader, we are at the cutting edge of product innovation. But we've been there for 50 years now, so we know exactly what it takes to stay there. Manufactured to meet federal, regional and local specifications, Delta faucets offer abundant replacement parts, a comprehensive warranty, and confidence earned through a punishing regimen of durability testing. Handles are turned on and off 500,000 times to ensure leak-proof performance for years. And before it leaves the plant, every faucet undergoes more than 100 hand inspections, including air and water testing.

To the customer, it can seem like each Delta faucet was made with them in mind. We listen closely to what consumers want and need, invest in extensive research and design, and apply smart technological solutions that really do make our customers' lives easier. We are at the cutting edge of product innovation. But we've been there for 50 years now, so we know exactly what it takes to stay there.

The Rheem Story

Richard Rheem

Donald Rheem

Rheem Manufacturing Company was established in the mid-1920s when brothers Richard and Donald Rheem acquired a galvanizing plant in San Francisco, California. In the 1930's, Rheem began manufacturing water heaters, and by 1936 had coast to coast distribution. During the 1940s and 1950s, the company increased its product line to include space heating units for homes, oil furnaces and air conditioners.

In 1959, Rheem acquired Ruud Manufacturing Company, a pioneer in the water heating industry with a well-regarded product line and a distribution network throughout North America. In subsequent years, Rheem entered the heating and air conditioning market and expanded in the late 1960's and 1970's with the rapid growth of the central air conditioning industry. In 1985, the company acquired Raypak, a leading producer of copper tube boilers used for swimming pool heating and commercial hot water supply and hydronic heating.
